President's Message

Hello Everyone,

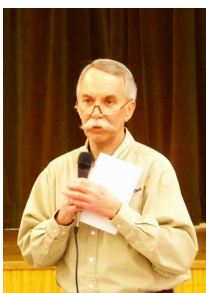

June 20th & 21st we held our annual Coin & Token Show at the Larry H. Miller Training Center in Sandy. It seemed to be well attended, and the dealers had smiles on their faces at the end of the show. We sure want to thank everyone that signed up to help with the setup, the hospitality desk and the take down. That's what makes a great show, when everyone shows up and does their job. Financially the club did great, so we will have plenty of money for the coming year. As you may not know, this show is the main money maker for the club each year. The money is used to pay rent for the room we meet in, buy raffle prizes, print and mail out the monthly newsletter, provide a treat each month, and many other miscellaneous items.

Want to thank Tyson Emery from All About Coins for the fine presentation he gave at our last meeting on the "White" brand of metal detectors. I think we all learned a lot, at least I did. Hopefully you have some good information to take with you when you go out to buy a new detector. It was also fun to give away a brand new "Coin Master" metal detector during the raffle.

For this month's meeting we are moving it to the 3rd Thursday, July 17th, because the 4th Thursday is the 24th. I hope that is OK with everyone. For that evening we have a bourse night planned. Members can bring anything they want to sell to those in attendance. We'll have plenty of tables setup to spread your stuff out on. So put lots of money in your pocket and support your fellow club members.

Hope to see you there July 17th!

Tom Davis

Finds of the Month

**Guest Speaker: Tyson Emery from All About Coins
Demonstrating and Explaining the White Metal Detectors**

The White's Brand of metal detectors are 100% built in Oregon, come with a 2 year warranty and range in price from \$180 to \$1800. Their entry metal detector is the CoinMaster and comes with a two filter system, which will help you determine the type of metal and how deep it is. For their upper end machines, they can distinguish between a copper and zinc penny, or the type of quarter that you have found (silver or clad). The more expensive detectors have more filters to eliminate minerals and it has automatic ground balancing.

Metal detectors work by producing an electromagnetic field and reading the changes in the field as they pass by metal objects. The coil produces a cone shaped field, and size is determined by the size of the coil or loop. For a large coil it may not detect the top 3 or 4 inches. It is also possible to get a Double D coil that has two coils shaped like two capital Ds with their backs to each other. They do well in high trash areas, with multiple targets and have a bigger sweet spot. The lower end detectors use an 8 kilohertz frequency while the higher end ones use 15 kilohertz. Often a digger will also use a hand held pin pointer to isolate where their target is in a hole. The White brand costs about \$160. Most of the White's metal detectors weight about 3 to 5 pounds with batteries.

Western Mine and Railroad Museum in Helper (294 S Main St.)

The museum offers many historical artifacts from the coal mine, and everyday items. Other items include: trains, kitchen, musical instruments, beauty salon equipment, bottles, pins, ladies' hats, western art, and dinosaur tracks.

Welcome Visitors and New Members

Shane Poyurs explaining how well the coin show did for the club: net profit about \$4700. We sold more tables than ever, 17 more than last year.

The Winner of the Coinmaster
